

## BUILDING DESIGN SERVICES

### ***DIETZMAN DEVELOPMENT/WILLIAMS CONSTRUCTION—PHELPS COUNTY REGIONAL MEDICAL CENTER CLINIC—ROLLA, MO***

Integrity Engineering, Inc. was employed by the Owner and his preselected contractor to design a 9000 square foot 2-story office building that would be leased to the Phelps County Regional Medical Center. The bottom floor houses the physician outpatient services, while the upper floor houses the home health division of the medical center.

The design process included meeting with the department personnel and administration of the hospital to work out detailed design of both departments, keeping the project on schedule and within the Owner's budget. The building is set on a sloping site which included extensive site design, grading layout, and adapting the medical facility to this challenging sight.
